COLLECTIONS

Tracing our past, forging our future

Atelier Collections are a collaboration with Palomba Serafini Associati and represent Ideal Standard's latest contribution to the culture of design.

Design led yet functional, the breadth of the new collections means each concept can originate endless solutions and creative options for any project.

"Together we work in search of the continuous synthesis between impeccable functionality and aesthetic harmony. This is for us the 'eternal value of design'."

— Roberto Palomba

Create personal spaces

Colour and form are essential in shaping mood, and enhance our sense of well-being in the spaces we create. In our ceramic collections, customers have a palette with the variety and versatility they need to create a very personal environment.

With a design philosophy informed by both the functional and the aesthetic, customers will find a unique range of solutions – made possible by our industry leading technologies.

Conca basin

Ceramics colour palette

Twelve colours, some inspired by our heritage, others completely new – all created to push the boundaries of bathroom creation.

Ipalyss, Pomegranate

Tonic II

A place of reflection

A free-standing bath is a bold design statement – a centrepiece that will elevate the style of any bathroom. From the bi-colour options to the contemporary lines, our collections gives the customer a way to add a touch of sophistication with a piece that is guaranteed to draw the eye.

For complete freedom

Blend Cube and Blend Curve are made to complement all of our collections. Their transversal quality brings a sense of simplicity, giving the designer greater freedom of expression.

Blend Curve WC & bidet

The power of personal expression

Our furniture offers designers the power of personal expression, with an inspiring range of colour, material and size combinations to suit any lifestyle. All wood used in our furniture is FSC certified.

Sophisticated touches

An integral part of the Atelier Collections, our bathroom furniture ensures customers can make a clear design statement. With fine touches such as Calacatta Marble finish, a beautiful range of mirrors, and interior features like soft-close drawers, interior lights and smart storage ideas for maximum comfort – our furniture turns a bathroom into a composition.

Ipalyss vessel basin 55 cm, White Silk finish
Conca wall mounted basin mixer
Conca basin unit 120 cm

Conca basin unit 120 cm 2 drawers, Dark Walnut finish

An enduring statement

Combined with our ceramics and furniture, the design and finish of our brassware palette create strong visual statements, guaranteed to endure.

Conca basin mixer, Magnetic Grey

Connect Air basin mixer, Chrome

Sustainability by design

Our brassware offers sustainable features in order to save water and energy, reducing the water consumption by up to 50% thanks to the 5 litres per minute aerator. With models including FirmaFlow® – our latest and most advanced cartridge – flow control, leak prevention and greater temperature control are also possible.

PVD Technology

In our coloured models, we use the latest technology – Physical Vapour Deposition – to preserve the vibrancy of our coloured models. PVD is a thin protective coating applied in a vacuum, which makes our products ten times more resistant to chemicals, wear, impact, discolouration and corrosion.

Fire the imagination

To help customers understand the creative potential of the Atelier Collections, we offer a number of compositions for display and as a reference for specifiers. A rich source of inspiration, they help the customer imagine the impact of over 30 product combinations in situ. Quick to order and install, the sets bring the beauty and versatility of the collections to your showroom.

CERAMIC PRODUCTS Materials and colours

Ceramic materials

Vitreous china is made from a mixture of white burning clays and finely ground minerals which after firing at high temperature, and when unglazed, does not have a mean value of water absorption greater than 0.5% of the dry weight. This 99.5% vitreosity means that, even unglazed, it cannot be contaminated by bacteria and will remain hygienic. It is coated on all exposed surfaces with an impervious non-crazing vitreous glaze giving white or colored finish. Vitreous china is stainproof, burnproof, rotproof, rustless, non-fading and is resistant to acids and alkalis. To produce vitreous china (and fireclay) a solution of slip is prepared. Slip is the term used in the trade to define casting clay. The ingredients for vitreous china casting slip are ball clay, china clay, sand, fluxing agent and water.

The main characteristics of these products are:

- Water absorption capacity <0.5%.
- Firing temperature: 1200°C - 1220°C.
- Acid, base, hot water, stain impact, abrasion, thermal shock resistant.
- Resistance to bending (500kg/cm²).

Fine Fireclay is made from a mixture of ground Vitreous China and Fireclay and has the advantage of holding shape better whilst manufactured. It is particularly suitable for products such as vanity basins and shower trays where it is important to achieve a flat base, whilst keeping the finish associated with vitreous china.

Seat materials

Duroplast - the raw material is in granules form and based on special pressing moulds, at the temperature of around 150°C in 2 tone press. Characteristics of Duroplast:

- Safety environment – no environmentally harmful substances.
- Resistant to cigarette burn marks – in accordance to DIN 438-2.18 regulation.
- Static Electricity – resistant to static electricity & this is why they repel dust.
- UV radiation – resistant to UV radiation - in accordance to EN 438-2.18 regulation.
- Durability – in accordance to EN 438-2.14 regulation, all seats are subjected to 150-kg endurance test.
- Chemical resistant – in accordance to EN 438-2.15 regulation.

Diamatec technology in collection Ipalyss®

Ipalyss® combines the best of nature: extreme robustness and delicate thin line thanks to our new super thin ceramic material **Diamatec**: Unique blend of ingredients with finely ground material blends of alumina (Aluminum Oxide, Al₂O₃ - it has the same sintered crystal body as sapphire and ruby) and refined clays (chamotte - prevents cracking and adds structural strength) in combination with sodium & potassium to create a robust body matrix that is able to support the beautiful design features of this product range.

Aquablade® technology

The exclusive and patented **Aquablade®** technology offers the best superior flushing performance ever, even at low water volumes. Benefits for you:

- Modern, hi-tech, tidy aesthetic: no visible rim, just a discrete slot,
- No overhang,
- Highest quality flush,
- Low splash,
- Excellent wash from top of bowl,
- Low noise level – the water flow is moving like a blade on the ceramic surface with minimum turbulence.

Ipalyss® basins Colours

In continuity with the most contemporary trends, Ideal Standard introduces new nuances inspired by the colors that have distinguished the company's historical production. The new palette combines historic colors, updated in shades and presented in the opaque version, with new more contemporary colors. The study of the colors has been calibrated on the historical tones of the modernist architects and on the most successful shades that guide the trend of resins and wall paints for the interior, with the aim of supporting the work of interior designers who can easily combine our color proposal in their projects.

SANITARY BRASS Materials and colours

Brass fitting materials

The taps and mixers are made of brass of constant and controlled chemical content to meet the European standards. The company guarantees customers the materials high quality without risk for health.

Coatings

In order to achieve the shiny surface the company uses the proven **method of electroplating**. Thanks to the modern equipment the European standard EN 248 is fully met. All visible plastic details are electroplated after being previously copper plated which assures the surface durability and its aesthetic look.

Physical Vapor Deposition (PVD) is a method for producing metal-based hard coatings by means of generation of partially ionized metal vapor, its reaction with certain gases and by forming a thin film with a specified composition. The typical process temperature for PVD coatings is between 250 and 450 °C.

PVD finishes can be found in cutting and forming tools, mechanical components, medical devices and products that benefit from the highly resistant and decorative features of the coatings.

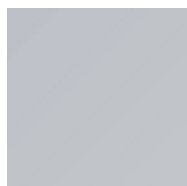

They are being used extensively for decorative purposes in numerous applications where superior adhesion, wear and scratch resistance are important to ensure a perfect look for an extended period of time and intense use.

The main advantages summarised:

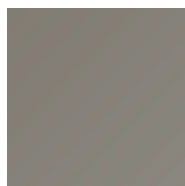

- High Hardness,
- Scratch and scuff resistance,
- Wear resistance,
- Chemically inert/non-tarnish, also in wet surroundings,
- Odorless and hypoallergenic,
- The process to apply PVD coating is completely eco-friendly.

Sanitary brass Colours

Conca and Joy mixer ranges are available in a variety of colours. In addition to Chrome, there are the new PVD finishes Silver Storm, Brushed Gold and Magnetic Grey.

Chrome **AA**

Silver Storm **GN**

Brushed Gold **A2**

Magnetic Grey **A5**

Conca

Conca Basin mixer

Description

One-hole basin mixer with pop-up waste

28 mm ceramic cartridge, hot water limiter, no click
Ideal Standard logo on the body

ACCESSORY Materials and colours

Accessory materials

Accessories are made of brass of constant and controlled chemical content to meet the European standards. The company guarantees customers the materials high quality without risk for health.

Coatings

In order to achieve the shiny surface the company uses the proven **method of electroplating**. Thanks to the modern equipment the European standard EN 248 is fully met. All visible plastic details are electroplated after being previously copper plated which assures the surface durability and its aesthetic look.

Physical Vapor Deposition (PVD) is a method for producing metal-based hard coatings by means of generation of partially ionized metal vapor, its reaction with certain gases and by forming a thin film with a specified composition. The typical process temperature for PVD coatings is between 250 and 450 °C.

PVD finishes can be found in cutting and forming tools, mechanical components, medical devices and products that benefit from the highly resistant and decorative features of the coatings.

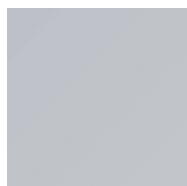

They are being used extensively for decorative purposes in numerous applications where superior adhesion, wear and scratch resistance are important to ensure a perfect look for an extended period of time and intense use.

The main advantages summarised:

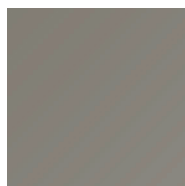

- High Hardness,
- Scratch and scuff resistance,
- Wear resistance,
- Chemically inert/non-tarnish, also in wet surroundings,
- Odorless and hypoallergenic,
- The process to apply PVD coating is completely eco-friendly.

Accessory Colours

Conca accessories are available in a variety of colours. In addition to Chrome, there are the new PVD finishes Silver Storm, Brushed Gold and Magnetic Grey.

Chrome **AA**

Silver Storm **GN**

Brushed Gold **A2**

Magnetic Grey **A5**

BATHTUBS Materials and colours

Acrylic material

The quality of acrylic bathtubs and shower trays meets the highest requirements. All stipulated specifications are strictly observed and the production and our products are certified by TÜV. The TÜV certification symbol further certifies the exclusive use of the quality acrylic material according to EN 14516: 2010 European Standards. Furthermore, the acrylic products bear the AFNOR NF certification mark. The Ideal Standard bathtubs are, therefore, synonymous to exceptional quality.

- Scratch resistance.
- Chemical/ solvent element resistance.
- UV resistance (does not become yellow).
- Material sturdiness (does not break).
- Shiny appearance: glossy texture.

"Solid surface" material

Natural mineral aluminum mixed with acrylic polyester resin; extremely stain & scratch resistant.

Thermal Stability: Solid surface walls stay warm to the touch so that one can bathe for longer without adding hot water.

Nonporous & hygienic surface is also key advantage – no mold, mildew, bacteria & germs are generated.

Non fading due to nature of material; impact resistant, maintain original surface.

Easy to clean & low maintenance material; Resistant to chemicals & stains.

Freestanding bathtubs Colours

The new bathtubs from the Atelier Collections are available in 5 different colours:

White Matt **EN**

White Gloss **01**

White Matt **V1**

White Gloss/
Black Gloss **V2**

White Matt/
Black matt **V3**
